TRADEMARKS

Trademarked names appear throughout this book. Rather than list the names and entities that own the trademarks or insert a trademark symbol with each mention of the trademarked name, the author states that it is using the names only for editorial purposes and to the benefit of the trademark owner with no intention of infringing upon that trademark.

Release 2016.1

Vasont Editorial Environment

This section outlines the enhancements and new features in the Vasont editorial environment for Vasont 2016.1.

Retrieve Descendant Modules

A new processing option creates a menu item that allows users' to view modular content referenced by the selected component. The list of modules can also be limited so that the display will only show components that are checked out to the current user. This processing option was developed for a specific client and their configuration. (Ref. No.: 2700)

Vasont Administrator

This section outlines the enhancements and new features in the Vasont Administrator for Vasont 2016.1.

Trans_clone_conref_targets System Profile

A new system profile has been added which modifies the translation clone process logic to consider conref target content when determining if a source primary (e.g. English Topic) needs to be cloned for translation. Normal logic is to only consider changes in the topic itself when determining if the source has changed since the last time the topic was translated. When the system profile is set to "yes", translation clone logic will also interrogate the topic's conref target content to determine if it has changed since the last time the topic was translated. (Ref. No.: 2218)

Vasont Universal Integrator

This section outlines the enhancements and new features in the Vasont Universal Integrator (VUI) for Vasont 2016.1.

Enhancements for Viewing the Load Errors File

Enhancements have been made to the load errors file which is created when attempting to update the database and there are file loading errors. If there are load errors while attempting to update the database when using VUI, the user is either presented with a window listing the logged errors or a message stating to view the log file to see load errors. The load errors file includes all errors and warnings which are logged when loading the file from VUI. (Ref. No.: 2915)

Collaborative Review

This section outlines the enhancements and new features for Collaborative Review for Vasont 2016.1.

Enhancements for Viewing Comment Discussion and Comment Reason

The Collaborative Review feature now allows users to view a comment discussion while in editing or read-only mode. The addition of the right-click menu option to Show Discussion allows users to easily view a discussion. En-

enhancements also allow users to view a comment reason while in read-only mode with the addition of the right-click menu option Show Reason. (Ref. No.: 2728)

Ability to Save Individual User Preferences and Layout Options

Enhancements have been made to the Collaborative Review interface so an individual user can save personal user preferences and layout options with the addition of the VUI menu item "Save My Preferences." This allows each review participant to open a review file with their individual options once preferences are saved. (Ref. No.: 2466)

Changes To Locate User Options and Layout

Enhancements have been made so individual user preferences may be saved and not overwritten by another user when using the Data Center. These changes allow the installer to store files in the users' local folder and enable the plugin to read the files from that location. (Ref. No.: 2056)

Processing Options

The following processing options have been added or altered in Vasont 2016.1.

New Processing Options

ignore_version_extract	skeleton_analysis_report
retrieve_modules_to_nav	version_on_demand_selective

Software Fixes

The following issues have been fixed for Vasont 2016.1.

Vasont

- **Similar Tasks Filter Criteria**

Fixed the situation where the Similar Tasks information bar on the Workflow Details pane would display all tasks regardless of filter criteria. Now, the Similar Tasks information bar displays only tasks which match the filter criteria including the Vasont ID and Project Id. (Ref. No.: 2325)

- **Default Drag/Drop Wizard Action**

Fixed the situation where the default drag/wizard action did not match the User Profile setting. Now, the default wizard action will reflect the individual users' profile setting. (Ref. No.: 2512)

- **Disabled Attributes Incorrectly Displayed**

Fixed the situation where attributes were not grayed out when disabled. Now, if an attribute is disabled, it will display in gray and is not selectable. (Ref. No.: 2490)

- **Double Extract of Fast Extract Conref and BLOB**

Fixed the situation where a double extract occurred when using fast extract. Now, use of conref and fast extract will result in a single extract of the content. (Ref. No.: 2783)

- **Workflow and Annotations Report Display**

Fixed the situation where Vasont would crash after repeatedly opening the Workflow and Annotations Report. Now, opening and closing the Workflow and Annotations Report using the "WF Annotations RPT button" will not result in a Vasont crash. (Ref. No.: 2350)

- **Workflow and Annotations Report Text Display**

Fixed the situation where text shown in the Workflow and Annotations Report was incorrectly displayed, overlapping, or missing. Now, the navigator_display processing option will display the correct text in the component field without overlapping additional text or other fields. (Ref. No.: 2326)

Vasont Administrator

- **Workflow and Annotations Report Date Formats**

Fixed the situation where some date formats and separators were reported as invalid when entering and saving in the system profile. Now, specific date formats are supported and are valid when entering into the system profile. (Ref. No.: 2327)

Vasont Universal Integrator

- **Load Selection Window Display**

Fixed the situation where the load view selection window is displayed in the background rather than the foreground when using VUI to update Vasont. For example, users would not notice the window since it displayed in the background and would not be able to select a load view to start the process to update the database. Now, the window displays in the foreground and the user can select a load view when updating the database. (Ref. No.: 2784)

- **Search Using Saved Filter**

Fixed the situation where the saved filter for VUI would sometimes return all content instead of allowing the user to enter additional filter criteria. For example, a user would select a collection and then select a filter to open a Vasont Navigator. If the user would select the back button instead of additional filter criteria, then once the search filter was again selected by double-clicking, it would return all content. (Ref. No.: 2651)

- **Prevent Changes to Read-Only Content**

Fixed the situation where read-only content is able to be changed after extracting a file. Now, the review editor recognizes the file is read-only and prevents changes to the extracted file. (Ref. No.: 2289)

- **Loading Changed Modular Content**

Fixed the situation where values of status attributes were inconsistently changed or not changed at all when updating the database. Now, all extracted files will have the attribute values set consistently and edited files will have the attribute value changed when the file is saved. (Ref. No.: 2290)

Collaborative Review

- **Comment Accept All/Reject All**

Fixed the situation where the comment status was not correctly displayed in the comment bubble. Now, when the user selects to Accept All or Reject All comments while in editing mode, each comment bubble displays a check mark and the correct status of either "Accepted" or "Rejected". (Ref. No.: 2904)

- **Comment Offsets After Refresh**

Fixed the situation where comment offsets are sometimes set incorrectly after a refresh. Now, when a user adds a comment, refreshes, and closes the application, once they reopen the review file the comments are set in the correct area. (Ref. No.: 3096)

Processing Options

- **restrict_attribute_values**

This processing option has been modified for faster performance when opening a collection. (Ref No.: 2956)

- **client_key_prefix**

Fixed the situation where a client key prefix is duplicated when performing a branch on content. For example, in the Vasont Administrator, this processing option is applied to a collection in the edit view. The prefix value is set to arc_. When branched, a component with the client key of v12345 will display as arc_v12345. (Ref No.: 2312)

- **extract_in_separate_file**

This processing option has been modified to correctly extract the proper content to which it is applied into a separate file. (Ref. No.: 2500)

Release 2016.2

Vasont Universal Integrator

This section outlines the enhancements and new features in the Vasont Universal Integrator (VUI) for Vasont 2016.2.

Change Image Selector to Default to Thumbnail View

Enhancements have been made to the image selector for the VUI. When searching for an image, the image selector will now default to show thumbnail views for images. (Ref. No.: 2482)

Processing Options

The following processing options have been added or altered in Vasont 2016.2.

New Processing Options

component_ownership_update_by_attr	update_primary_attr_from_childref_batch
exclude_by_attribute	update_primary_attr_from_geo_childref
extract_target_hierarchy	update_primary_attr_from_geo_childref_batch
load_siblings_to_pointer	update_primary_attr_from_geo_target
update_last_edit_date	update_primary_attr_from_target
update_primary_attr_from_childref	

Software Fixes

The following issues have been fixed for Vasont 2016.2.

Vasont

- **Error with Workflow Initiation**

Corrected the issue where an error was presented and Vasont would shut down upon initiation of workflow for specific components. Now workflow will initiate with no errors or software crashes. (Ref. No.: 3796)

- **Printable Report Window Controls**

Fixed the situation where controls for closing, minimizing, and maximizing windows were no longer shown for printable report windows. Now the controls are available to the user for control functions. (Ref. No.: 4006)

Vasont Administrator

- **Workflow with the Exclusive Check Box**

Corrected the situation where project information could not be modified without having the check box for exclusive workflow selected. Projects may now be renamed and other information changed without having the exclusive check box selected. (Ref. No.: 3525)

Vasont Universal Integrator

- **Hide DITA Keyref Option When Not Applicable**

The oXygen VUI menu item of Dita Keyref has been disabled and hidden. This option will display only for clients who have this feature configured in Vasont. (Ref. No.: 3268)

Collaborative Review

- **Participants Bar with Review Seat User**

Fixed the situation where Vasont would shut down if a review only seat user clicked on the Participants Bar. Now a review seat user is able to view review participants without issue. (Ref. No.: 3370)
